

Magazine Authors

This list includes the names of all authors who have written one or more articles of at least one page in length in the three most prominent popular science magazines published in Britain, 1919-1939 (for details see *Science for All*, chapter 9). Numbers of articles written are indicated thus, AS = *Armchair Science*, C = *Conquest/Modern Science*, D = *Discovery*, so D 2 means two articles written for *Discovery*.

Names are listed with qualifications and positions as given in the magazines. For details of abbreviations used see the Biographical Register in *Science for All*. [BIO] indicates that the individual has an entry in this register. Where an author was described as “Dr. X” (so the nature of the doctorate is unclear) I have inserted “Doctor” after the name along with any other qualifications known. Details have not been confirmed independently and the abbreviations for some qualifications listed below are unknown and are taken on trust. “Expert” indicates that some informal indication was given of expertise in the subject. “Author” indicates that information concerning other publications, usually books, was provided.
